

Are you and your recruiting teams hiring the same person you have interviewed?

Most companies cannot detect interview impersonation till it is too late. Make sure you're not one of them

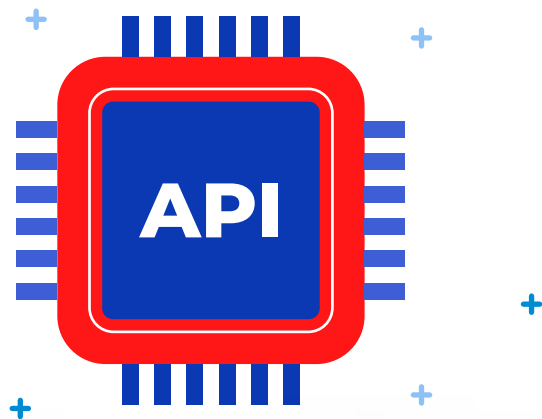

Instances of impersonation during interviews, especially during remote hiring, is skyrocketing.

Unfortunately, most companies have not taken steps to detect and red-flag impersonation.

Detect and prevent interview impersonation

Evaluationz' on-demand API-integrable interview impersonation detection tool is powered by AI and has the capability to provide **upto 99% match** of the genuineness of the candidate (using face, voice, audio/video and government ID) across the various stages of the interview process on a real-time basis, right up to the onboarding stage.

These verifications can be triggered across various stages in the hiring process and is compatible with any platform for online interviews – Google Meet, Microsoft Teams, Zoom, etc.

3 factor authentication

Face, Voice, Government ID

Real-time detections

Multi-platform

Google Meet, Microsoft Teams, Zoom, and Others

Real-time matching with instant authentication and talent onboarding

Evaluationz' verification solution compares and matches the candidate's face/ voice/ audio video sample along with their government ID during the initial video call. Video and audio data gathered during each round is used to cross-reference across the various rounds/ stages of the interview to ensure that the same individual is appearing for every round.

The software flags mismatches in real-time, giving customer onboarding teams the option of rejecting or declining the candidate profile immediately. No wasting time or effort on unethical candidates.

In the final phase of the candidate's physical joining, verification of identity can be compared with face and audio recognition from the online interviews as well as government IDs.

Even twins can be told apart

About Evaluationz

Evaluationz is a tech-enabled risk mitigation and background verification services provider leveraging AI technology with cross-purpose features and ability to cater to tailor-made solutions based on the organization requirement or industry. Founded in 2006 with focus on employee background verification services, Evaluationz now offers vendor and seller verification, user and e-KYC verification solutions. Evaluationz is a NASSCOM NSR empaneled company and an ISO 9001:2008 & ISO 27001:2013 certified company.

BlueG, Evaluationz' proprietary AI-powered platform, can integrate and work seamlessly for "comprehensive cross-purpose verifications" addressing users across various platforms like e-commerce, fintech, banking and other vendor management, HRS & ATS platforms; employees within organizations and vendors/sellers across industries and verticals. BlueG leverages the power of artificial intelligence, and componentized government identity documents and databases to make accurate results available in real time.

3 factor authentication for Informed accuracy

Evaluationz' impersonation verification works on 3-factor authentication -face, voice and government ID. The solution has face recognition capabilities upto 99% accuracy and works on video as well as still images from a screen capture. The software is so sensitive that the detection can be made even on the basis of voice.

Save time and effort while increasing scale and speed of hires, ensuring that unethical candidates are filtered out upfront in the hiring funnel.
